

Keep your Super Sky Cycle at home in the garage.

The Super Sky Cycle flies and drives on automotive gasoline.

The Butterfly, LLC is introducing the Super Sky Cycle. This new technology is simple and safe. The flying part is gyroplane based and is stall resistant. Take off from your driveway or a nearby field. A runway isn't required. A hangar isn't needed. Be the first person in your neighborhood to own a Super Sky Cycle. Dealerships are available.

Take the Super Sky Cycle for a drive or fly it near to your destination and then drive the rest of the way.

You will get a lot of attention driving your SSC around.
