Story: [A slow liftoff for the personal helicopter](#)

I first discovered the company in a video here: <http://thatvideosite.com/video/1797>

You can find their web site here: <http://www.thebutterflyllc.com>

They have a really cool invention that is sort of a "motorcycle" with a gyroscope on it. You can actually cut power to the gyroscope and it will float down.

They have models that start around \$14,000 and I think it is cooler than air scooter because you can drive it on the normal roads too. (see the video).

The Butterfly is not vapoware either, you can buy them today and for well under \$50K.
