I know you all are feverishly waiting for the Jetsons-like [M200G](#) flying car but, its cost might restrain you from buying one. You surely need some good alternative to whet your appetite to fly in the sky. A genuine flying motorcycle dubbed [Super Sky Cycle](#) could be yours for the price of a car. Larry Neal's company named The Butterfly has put its first 30 Super Sky Cycle kits into production.

Powered by a 100-horsepower Rotax 912 ULS engine, the tricycle-g geared gyroplane with a folding rotor could reach the speeds of up to 100-mph in the air and 55-mph on the road. Simply assemble the kit and your flying machine is ready to take you for a fairy ride. The Super Sky Cycle kit comes complete with the Rotax engine for **\$37,195**, a few thousand dollars more than what you paid for your Infinity G35.
