[Fly Your Motorcycle To Work](#)

Posted In: [Products](#), [All Stories](#)

With my miserable 49 mile commute to work every day, I've been constantly wishing I had a way to turn my drive into a flight. The [Moller Skycar](#) has, of course had me dreaming since I first saw it, but its been vaporware so long that I have all but given up. Furthermore, there is now evidence that [the company might be scamming investors](#), and with a price tag of \$500,000 to \$1,000,000, I can't imagine buying one even if they hit showrooms tomorrow.

The [Super Sky Cycle](#) made by [Butterfly Gyroplane](#), might just be the ticket though. It can take off and land in just a few feet, making it handy for flying to places that don't have an airport. It can fly at a top speed of 100 MPH, meaning I could get to work much much faster than the 1 + hour it takes me now. An for the best part, you can fold up the rotors once you land and drive it in motorcycle mode to your final destination! I have to wonder if it will fit into a standard parking space.

My days of driving to work aren't quite over though... I will still have to save my pennies if I'm going to pony up the \$37,195.00 to buy one. Still, the Super Sky Cycle is the most promising alternative to driving I've been able to find so far.
